Kansas City, MO • (816) 854-0668 • usakim97@gmail.com • usakim97.github.io • github.com/usakim97 • linkedin.com/in/usakim

IT professional and software development graduate seeking an entry-level IT Support or Junior Developer role. Ten years as the sole technical resource for real-world systems — POS and delivery platforms, self-hosted server infrastructure, and distributed automation pipelines.

EXPERIENCE

Steam Bowl Chinese Restaurant — Kansas City, MO

Aug 2016 – Aug 2026

IT & Operations (concurrent with roles below)

- Sole technical resource for POS, delivery platforms, and security systems — diagnosed and resolved hardware/software issues without external support
- Administered Clover Duo POS end to end: initial setup, staff onboarding and training, and ongoing troubleshooting
- Worked outages and billing discrepancies through DoorDash, Uber Eats, and Grubhub vendor support; managed account configuration, promotions, and disputes across all three platforms
- Installed and configured the security camera system; supported daily operations — purchasing, scheduling, and banking reconciliation

City Thrift / Team Thrift — Kansas City, MO

May 2021 – Jun 2022

Office Administrator → E-Commerce Specialist

- Resolved ad hoc technical issues faster than the on-staff IT contact; became the person staff went to for tech problems
- 100+ voicemails a day, each needing logging, follow-up, and scheduling; built an intake process for the volume and trained my replacement to run it before departure
- Managed online marketplace listings end to end; proposed and implemented an Apple ecosystem workflow for the listing team

Twisted Fresh — Kansas City, MO

May 2017 – Mar 2020

Assistant Manager

- First point of contact for staff hardware and software issues; repaired and maintained the POS hardware and peripherals
- Trained all incoming staff on POS, food prep workflows, and customer service standards
- Led a two-person kitchen shift through 40+ orders in a single hour — over \$320 in revenue — with zero errors or complaints

PROJECTS

Self-Hosted Home Server & Media Infrastructure

- Designed and deployed a full self-hosted stack on a UGREEN NAS using Docker and Portainer: Jellyfin, Sonarr/Radarr/Lidarr, Gluetun/ProtonVPN, Uptime Kuma, VaultWarden, and Tailscale
- Resolved NAT loopback, reverse proxy conflicts, and host-networking edge cases to get automated media acquisition pipelines running with custom quality profiles and VPN-integrated download clients

Distributed Video Encoding Pipeline

- Automated a two-PC distributed encoding workflow using PowerShell scripts watching NAS-mounted folders for job intake, distribution, and assembly — handling Unicode sanitization and wildcard path edge cases

Self-Hosted AI Workspace & Training-Data Pipeline

- Run a multi-service Docker Compose deployment — FastAPI, ChromaDB, SearXNG, ntfy, Cloudflare tunnel — over Tailscale; contributed media ingest, transcription, and UI fixes to the open-source project
- Designed a screening-gated workflow: clips cut cheaply first, held for human review, GPU captioning only after approval — no model time spent on rejected footage
- Evaluated two speaker-diarization models against a labeled calibration set; selected pyannote after it scored 6/6, catching a case the other model missed

EDUCATION

Metropolitan Community College — Kansas City, MO

Graduated Dec 2025

A.A.S. in Software Development • Dean's List

SKILLS

Technical: Docker / Portainer, Linux (CLI), PowerShell, Networking & DNS, POS Systems (Clover Duo), Windows & macOS, Git

Development: Python, C#, WinUI 3, C++, Java, JavaScript, HTML/CSS, SQL, Bash / Shell Scripting, FastAPI, REST APIs, ffmpeg
